ACCESS360

WORKSITE ACCESS MANAGEMENT SYSTEM

So, if unauthorised access to your premises is the problem, Access360 is the solution

Access360 is an access control system that electronically manages the access and authorisation to your premises. It is a cloud-based platform that can integrate with physical access control technology, such as turnstiles and barriers, to prevent unauthorised individuals and vehicles from entering restricted areas.

Using cloud-based technology **Access360** users can securely manage their premises access requirements, in real-time, through the online dashboard.

Access management to plan when a person is allowed access

API allows users to link software into access control technology

Compliance assured with card types and compliance checks

Create and run access based reports

Control manager sets the location and access times of site

So, Access360, what will it do for me, how will my business benefit?

Access control technology and software is a cost effective and secure solution to managing, monitoring, and maintaining security access control across your premises. Our **Access360** platform is both easily integrated with your existing hardware and very user-friendly.

The key benefit of **Access360** is the ability to securely manage, control and protect your people, property, and premises from unauthorised access. The software enables users to remotely manage their security requirements and authorisation levels to promote efficiencies and safety across their locations. Additional key benefits of **Access360** include:

"Ensure that only expected, qualified workers have access to site

"See attendance data in real-time

"User-friendly and seamless installation on existing IT hardware

"Reporting available directly from **Access360** or integrated with existing systems
