Worksite management through a single interface

# So, if the management of your worksite is the problem, Worksite360 is the solution

Worksite management is the integrated process of managing and coordinating the productivity and performance of all elements of a work environment, ensuring a project, target or scope of work is met.

**Worksite360** provides a complete end to end work site management solution, all accessible from one cloud-based interface. It enables all stakeholders on a project to have access to every aspect of it. Scheduling and safety tools effectively manage the ongoing work and provide up to the minute reports on work site activity and performance.

Forecasting tasks/workload alongside required resources

Plan project workload and resources, ahead of time, monitor project progress in real-time

Issue plant and equipment to specific staff, flag any issues and resolutions as they happen

Staff qualifications, PPE etc are checked at entry to worksite

# So, Worksite360, what will it do for me, how will my business benefit?

Effectively managing your work site saves time, money and increases the productivity and performance of your workers. It ensures you get the right people, on the right job at the right time.

Workers are a key component in the day-to-day operation of any ongoing project and need to be carefully managed and accounted for. Organisations and projects that effectively manage their work site will see improvements and benefits
